

## AdapLink ESOPT Integrator

### AdapChain

At AdapChain we are in the business of helping companies implement flexible and sustainable supply chain solutions. AdapChain has always focused on achieving real, sustainable results through simple, fast, and cost effective means.

The AdapLink toolset is a great example of this approach. With AdapLink we addressed one of the most common obstacles in implementing supply chain systems: DATA and INTEGRATION.

AdapLink is a powerful ETL (Extraction Transformation and Load) tool. Through AdapLink we solve the data and integration problems, which in turn allows You to focus on your supply chain.

AdapLink makes it easy to bring data from diverse sources together like SAP ERP, external databases, text files, or spreadsheets for your supply chain solution.

### AdapLink ESOPT Integrator

When we started working with Oliver Wight around their leading ESOPT application it quickly became clear that we could raise the bar even further from a speed, flexibility, and cost perspective.

Through collaboration with Oliver Wight we have developed the “AdapLink ESOPT Integrator” template. This template ensures that the typical data elements required for most ESOPT implementations can be pulled directly from your SAP ERP system or from other data sources.

The template contains standard integration from SAP ERP of all the major data elements like:

- Demand (shipments, consumption etc.).
- Supply (production, purchases, etc).
- Inventory.
- Hierarchies and attributes.

Once the data has been extracted it can easily be aggregated to the levels that make best sense for your ESOPT.

## **AdapLink takes care of the data so that You can focus on S&OP.**

Implementation: Full implementation typically takes less than one week. 40 hours of consulting is included in the template cost. Travel expenses not included for on-site service delivery.

ESOPT license must be acquired separately from Oliver Wight

System requirements: MS Windows PC or server with 1 GB RAM.
